

## **EHang Sets Up Aerial Emergency Channels to Help Fight Coronavirus in Guangdong, China**

June 14, 2021

**Guangzhou, China, June 14, 2021** – Since the beginning of the recent coronavirus resurgence in China's Guangdong Province, EHang Holdings Limited (Nasdaq: EH) ("EHang" or the "Company") has stepped up as a first-responder and leveraged its autonomous aerial vehicle (AAV) technology by dispatching a flight operations team and multiple AAVs for COVID-19 relief and control efforts in Guangzhou City. The Company illustrates its commitment to fulfilling social responsibility amidst the added pressure and challenges the coronavirus escalation has brought to the community and quickly responded to the government's call for COVID-19 relief support.

Starting from June 4, EHang has successively deployed the passenger-grade AAV EHang 216, EHang 216L (logistics model), EHang Falcon B series and Falcon B (logistics) for epidemic prevention and control efforts. With the technical advantages of autonomous flight as well as capabilities for rapid response and cluster management, the EHang 216 and EHang 216L AAVs built emergency air transportation routes across the Pearl River in Guangzhou, successfully completing multiple "contactless" relief and support tasks in the quarantine and containment zones. Tasks covered aerial logistics, emergency transportation, aerial inspections and broadcasting, transporting necessary daily household supplies to residents in the quarantine zones, and implementing urban air mobility (UAM) systems in emergency transportation scenarios.

EHang Falcon B conducting aerial inspections and aerial broadcasting tasks

As of today, EHang has been actively involved with epidemic relief and support for 11 days. EHang's designated flight operations team will maintain its station near the quarantine and containment zones to continue with household and emergency supply air transport to reduce risks of front-line staff contacting the virus, and further support the coronavirus control and prevention mission in Guangdong Province with improved efficiency.
